NBR. 466

Cartagena, Colombia and met with six of their Colombian counterparts. The purpose of the two day meeting was to make some critical decisions about the upcoming DXpedition to Malpelo Island. Also, checklists and inventories were finalized and all team members' responsibilities were assigned.

Since it is highly unlikely that the various Colombian authorities will permit another DXpedition to Malpelo anytime soon; a decision was made to extend the DXpedition to 16-17 days from the previous 12-14 day plan. The approximate dates of operations will be January 21, 2012 through February 5/6, 2012. Four team members will travel with all equipment, radios, antennas and infrastructure to Malpelo in early January. They will be transported by the Colombian Navy. They will arrive about two weeks prior to the rest of the Team and will set up camp, the two operating sites, radios and antennas. They will spend about 30 days on the island. This will allow the rest of the team to begin radio operations immediately upon arrival by chartered vessel.

As mentioned there will be two operating sites, each with a complete complement of antennas and radios with amplifiers. The first operating site will be co-located with the Colombian marine's camp on the east side of the island. It is clear to East Coast USA, EU and Africa. In order to have a clear shot at JA/Asia, the Pacific region and W6/W7; the second operating site will be located near the top of the highest mountain peak on the island. However, to lessen the physical risks to the team members, the operating site will be located on platforms situated below the actual peak. Still, it will be a 45 minute uphill climb to reach the platforms. The antennas for that site will be on the top of the mountain peak. At times, there will be as many as nine stations QRV with the capability of dual mode operations on all bands.

Safety of the team is paramount. We will be installing a winch system to hoist team members and all of our equipment from our chartered ship's Zodiac onto the island. From there, manpower will carry the equipment the 300 meters straight uphill to the marine camp. The trail to the elevated operating site is extremely dangerous. We will utilize harnesses and safety ropes to minimize the risks. This is going to be a difficult and expensive DXpedition. Every effort will be made to maximize QSOs while protecting the safety of the team members. It is a delicate balance.

Your financial support is necessary and gratefully accepted. Contributions can be made via our website at: www.hk0na.com/sponsors We plan periodic press releases with information of interest. Also, watch the website for breaking news.

Thanks,
Jorge Prieto, HK1R
DXpedition leader

Co-leaders:
Bob Allphin, K4UEE
Gregg Marco, W6IZT

The following operation is approved for DXCC credit:

ARLP048 Propagation de K7RA

I mentioned recently that some of the sunspot numbers released by NOAA didn't seem right. I just got word from Mike Husler at NOAA that data posted recently, like that record breaking day in which the sunspot number hit 220, were wrong, and the corrected data is now on their site. His email said, "Sunspot Number, Sunspot Area, Number of New Regions, Number of Spotted Regions, and Number of Spots calculations were at times incorrect on the external web for about 1 month. The current values are the correct values. Please use them."

Not sure how to correct the record on this, except to note it here, and if you are keeping track of data with this bulletin as a source, that you go back and correct the bad data.

The correct data is posted here:

http://www.swpc.noaa.gov/ftplib/indices/quar_DSD.txt

Between October 18 and November 9 the data on 18 of those 23 days was bad. On October 18 the SSN changes from 155 to 144, October 19 162 to 140, October 20 195 to 159, October 21 207 to 184, October 23 128 to 102, October 24 151 to 125, October 25 147 to 121, October 26 104 to 91, October 27 98 to 85, October 28 104 to 91, November 1 141 to 129, November 2 121 to 109, November 3 161 to 149, November 4 100 to 88, November 5 135 to 123, November 6 144 to 132, November 8 160 to 148, and November 9 220 to 208.

This means that the data in propagation bulletins numbered 42, 43,
